Apollo Mission Control - Manfred "Dutch" von Ehrenfried 2018-06-21

This book describes the history of this now iconic room which represents America's space program during the Gemini, Apollo, Skylab, Apollo-Soyuz and early Space Shuttle eras. It is now a National Historic Landmark and is being restored to a level which represents the day the flight control teams walked out after the last lunar landing missions. The book is dedicated to the estimated 3,000 men and women who supported the flights and tells the story from their perspective. It describes the rooms of people supporting this control center; those rooms of engineers, analysts and scientists most people never knew about. Some called it a "shrine" and some called it a "cathedral." Now it will be restored to its former glory and soon thousands will be able to view the place where America flew to the moon.

Pearl Harbor to Guadalcanal - Frank O. Hough 2013-01-12

This book, "Pearl Harbor to Guadalcanal: History of U. S. Marine Corps Operations in World War II, Volume I," covers Marine Corps participation through the first precarious year of World War II, when disaster piled on disaster and there seemed no way to check Japanese aggression. Advanced bases and garrisons were isolated and destroyed; Guam, Wake, and the Philippines. The sneak attack on Pearl Harbor, "day that will live in infamy," seriously crippled the U. S. Pacific Fleet; yet that cripple rose to turn the tide of the entire war

at Midway. Shortly thereafter, the U. S. Marines launched on Guadalcanal an offensive which was destined to end only on the home islands of the Empire. The country in general, and the Marine Corps in particular, entered World War II in a better state of preparedness than had been the case in any other previous conflict. But that is a comparative term and does not merit mention in the same sentence with the degree of Japanese preparedness. What the Marine Corps did bring into the way, however, was the priceless ingredient developed during the years of pence: the amphibious doctrines and techniques that made possible the trans-Pacific advance - and, for that matter, the invasion of North Africa and the European continent. By publishing this operations history in a durable form, it is hoped to make the Marine Corps record permanently available for the study of military personnel, the edification of the general public, and the contemplation of serious scholars of military history.

Automating Inequality - Virginia Eubanks 2018-01-23

WINNER: The 2018 McGannon Center Book Prize and shortlisted for the Goddard Riverside Stephan Russo Book Prize for Social Justice The New York Times Book Review: "Riveting." Naomi Klein: "This book is downright scary." Ethan Zuckerman, MIT: "Should be required reading." Dorothy Roberts, author of Killing the Black Body: "A must-read." Astra Taylor, author of The People's Platform: "The single most important book about technology you will read this year." Cory Doctorow: "Indispensable." A powerful investigative look at data-based discrimination—and how technology affects civil and human rights and economic equity The State of Indiana denies one million applications for healthcare, foodstamps and cash benefits in three years—because a new computer system interprets any mistake as "failure to cooperate." In Los Angeles, an algorithm calculates the comparative vulnerability of tens of thousands of homeless people in order to prioritize them for an inadequate pool of housing resources. In Pittsburgh, a child welfare agency uses a statistical model to try to predict which children might be future victims of abuse or neglect. Since the dawn of the digital age, decision-making in finance, employment, politics, health and human services has undergone revolutionary change. Today, automated systems—rather than humans—control which neighborhoods get policed, which families attain needed resources, and who is investigated for fraud. While we all live under this new regime of data, the most invasive and punitive systems are aimed at the poor. In *Automating Inequality*, Virginia Eubanks systematically investigates the impacts of data mining, policy algorithms, and predictive risk models on poor and working-class people in America. The book is full of heart-wrenching and eye-opening stories, from a woman in Indiana whose benefits are literally cut off as she lays dying to a family in Pennsylvania in daily fear of losing their daughter because they fit a certain statistical profile. The U.S. has always used its most cutting-edge science and technology to contain, investigate, discipline and punish the destitute. Like the county poorhouse and scientific charity before them, digital tracking and automated decision-making hide poverty from the middle-class public and give the nation the ethical distance it needs to make inhumane choices: which families get food and which starve, who has housing and who remains homeless, and which families are broken up by the state. In the process, they weaken democracy and betray our most cherished national values. This deeply researched and passionate book could not be more timely.

Fundamental Constructs in Mathematics Education - Sue Johnston-Wilder 2004-01-22

Fundamental Constructs in Mathematics Education is a unique sourcebook crafted from classic texts, research papers and books in mathematics education. Linked together by the editors' narrative, the book provides a fascinating examination of, and insight into, key constructs in mathematics education and how they link together. The choice of constructs is based on (some of) the many constructs which have proved fruitful in research and which have informed choices made by teachers. The book is divided into two parts: learning and teaching. The first part includes views about how people learn - from Plato to Dewey, as well as constructivism, activity theory and French didactiques. The second part includes extracts concerned with initiating, sustaining and bringing to a conclusion learners' work on mathematical tasks. Fundamental Constructs in Mathematics Education provides access to a wide range of constructs in mathematics education and orients the reader towards important original sources.

The Selected Writings and Speeches of Sir Edward Coke - Sir Edward Coke 2003

The Cambridge Intellectual History of Byzantium - Anthony Kaldellis 2017-11-30

This volume brings into being the field of Byzantine intellectual history. Shifting focus from the cultural, social, and economic study of Byzantium to the life and evolution of ideas in their context, it provides an authoritative history of intellectual endeavors from Late Antiquity to the fifteenth century. At its heart lie the transmission, transformation, and shifts of Hellenic, Christian, and Byzantine ideas and concepts as exemplified in diverse aspects of intellectual life, from philosophy, theology, and rhetoric to astrology, astronomy, and politics. Case studies introduce the major players in Byzantine intellectual life, and particular emphasis is placed on the reception of ancient thought and its significance for secular as well as religious modes of thinking and acting. New insights are offered regarding controversial, understudied, or promising topics of research, such as philosophy and medical thought in Byzantium, and intellectual exchanges with the Arab world.

EBOOK: Teaching Secondary Mathematics with ICT - Sue Johnston-Wilder 2004-10-16

"This is a book all mathematics teachers and teacher educators should read! It brings together a wealth of insights from a range of authors... The major issues confronting teachers of mathematics who wish to use ICT in different domains of mathematics are addressed in a clear and accessible way." Professor Celia Hoyles OBE, Dean of Research and Consultancy, Institute of Education, University of London Teaching Secondary Mathematics with ICT shows the reader how to use Information and Communication Technology (ICT) effectively to enhance the teaching of mathematics in the secondary school. The book explains which forms of technology can be used to improve mathematics teaching and learning, how to get started and where to go for further information. The first two chapters provide a useful introduction for those new to teaching mathematics with ICT. Further chapters cover topics including: ICT and the curriculum: number, algebra, geometry and statistics Making use of interactive whiteboards in the classroom Using the internet and video-conferencing to enhance teaching The book includes practical classroom scenarios and case studies (for example, the government-funded MathsAlive! Initiative), as well as discussions of general issues, such as the role of feedback and the use of ICT in whole-class teaching. It draws on current research and is supplemented by a linked web site, which provides access to demonstration copies of software and sample files. It also includes a directory of resources with lists of organisations, web sites, projects and further reading. Key reading for Education students specialising in Mathematics and all those teaching secondary mathematics, including non-specialists and those on professional development courses.
