The theory and application of structural analysis are presented as it applies to trusses, beams, and frames in this book/CD-ROM text. Emphasis is placed on developing the student's ability to both model and analyze a structure and on providing realistic applications encountered in professional practice. In each chapter, discussion of theory is followed by a summary of important concepts and a systematic approach for applying the theory. Example problems are solved using this method in order to clarify its numerical application. Chapter problems are given in sequential order of material covered, and arranged in order of difficulty. Classical methods of problem solving are emphasized over computerized matrix methods, but the CD-ROM supplies the STRAN computer program for checking answers to problems. Heat Conduction - Latif M. Jiji 2009-07-09

This book is designed to: Provide students with the tools to model, analyze and solve a wide range of engineering applications involving conduction heat transfer. Introduce students to three topics not commonly covered in conduction heat transfer textbooks: perturbation methods, heat transfer in living tissue, and microscale conduction. Take advantage of the mathematical simplicity of 0- dimensional conduction to present and explore a variety of physical situations that are of practical interest. Present textbook material in an efficient and concise manner to be covered in its entirety in a one semester graduate course. Drill students in a systematic problem solving methodology with emphasis on thought process, logic, reasoning and verification. To accomplish these objectives requires judgment and balance in the selection of topics and the level of details. Mathematical techniques are presented in simplified fashion to be used as tools in obtaining solutions. Examples are carefully

selected to illustrate the application of principles and the construction of solutions. Solutions follow an orderly approach which is used in all examples. To provide consistency in solutions logic, I have prepared solutions to all problems included in the first ten chapters myself.

Instructors are urged to make them available electronically rather than posting them or presenting them in class in an abridged form.
