**Pounder's Marine Diesel Engines and Gas Turbines** - Doug Woodyard 2009-08-18

Since its first appearance in 1950, Pounder's Marine Diesel Engines has served seagoing engineers, students of the Certificates of Competency examinations and the marine engineering industry throughout the world. Each new edition has noted the changes in engine design and the influence of new technology and economic needs on the marine diesel engine. Now in its ninth edition, Pounder's retains the directness of approach and attention to essential detail that characterized its

predecessors. There are new chapters on monitoring control and HiMSEN engines as well as information on developments in electronic-controlled fuel injection. It is fully updated to cover new legislation including that on emissions and provides details on enhancing overall efficiency and cutting CO2 emissions. After experience as a seagoing engineer with the British India Steam Navigation Company, Doug Woodyard held editorial positions with the Institution of Mechanical Engineers and the Institute of Marine Engineers. He subsequently edited The Motor Ship journal for eight years before becoming a freelance editor specializing in shipping, shipbuilding and marine engineering. He is currently technical editor of Marine Propulsion and Auxiliary Machinery, a contributing editor to Speed at Sea, Shipping World and Shipbuilder and a technical press consultant to Rolls-Royce Commercial Marine. \* Helps engineers to understand the latest changes to marine diesel engines \* Careful organisation of the new

edition enables readers to access the information they require \* Brand new chapters focus on monitoring control systems and HiMSEN engines. \* Over 270 high quality, clearly labelled illustrations and figures to aid understanding and help engineers quickly identify what they need to know.

*Pounder's Marine Diesel Engines and Gas Turbines*, Tenth Edition, gives engineering cadets, marine engineers, ship operators and managers insights into currently available engines and auxiliary equipment and trends for the future. This new edition introduces new engine models that will be most commonly installed in ships over the next decade, as well as the latest legislation and pollutant emissions procedures. Since publication of the last edition in 2009, a number of emission control areas (ECAs) have been established by the International Maritime Organization (IMO) in which exhaust emissions are subject to even more stringent controls. In addition, there are now rules that affect new ships and their emission of CO2 measured as a product of cargo carried. Provides the latest emission control technologies, such as SCR and water scrubbers. Contains complete updates of legislation and pollutant emission procedures. Includes the latest emission control technologies and expands upon remote monitoring and control of engines.

**Asian-Cajun Fusion** - Carl A. Brasseaux 2022-03-30  
Shrimp is easily America's favorite seafood, but its very popularity is the wellspring of problems that threaten the shrimp industry's existence. Asian-Cajun Fusion: Shrimp from the Bay to the Bayou provides insightful analysis of this paradox and a detailed, thorough history of the industry in Louisiana. Dried shrimp technology was part of the cultural heritage Pearl River Chinese immigrants introduced into the Americas in the mid-nineteenth century. As early as 1870, Chinese natives built shrimp-drying operations in Louisiana's wetlands and exported the product to Asia through the port of San Francisco. This trade internationalized the shrimp industry. About three years before Louisiana's Chinese community began their export endeavors, manufactured ice became available in New Orleans, and the Dunbar family introduced patented canning technology. The convergence of these ancient and modern technologies shaped the evolution of the northern Gulf Coast's shrimp industry to the present. Coastal

Louisiana's historic connection to the Pacific Rim endures. Not only does the region continue to export dried shrimp to Asian markets domestically and internationally, but since 2000 the region's large Vietnamese immigrant population has increasingly dominated Louisiana's fresh shrimp harvest. Louisiana shrimp constitute the American gold standard of raw seafood excellence. Yet, in the second decade of the twenty-first century, cheap imports are forcing the nation's domestic shrimp industry to rediscover its economic roots. "Fresh off the boat" signs and real-time internet connections with active trawlers are reestablishing the industry's ties to local consumers. Direct marketing has opened the industry to middle-class customers who meet the boats at the docks. This "right off the boat" paradigm appears to be leading the way to reestablishment of sustainable aquatic resources. All-one-can-eat shrimp buffets are not going to disappear, but the Louisiana shrimp industry's fate will ultimately be determined by discerning consumers' palates.
