*The Palgrave Handbook of Development Economics* - Machiko Nissanke 2019-08-12  
This Handbook responds to the needs and aspirations of current and future generations of development economists by providing critical reference material alongside or in relation to mainstream propositions. Despite the potential of globalisation in accelerating growth and development in low and middle-income countries

through the spread of technology, knowledge and information, its current practice in many parts of the world has led to processes that are socially, economically and politically and ecologically unsustainable. It is critical for development economists to engage with the pivotal question of how to change the nature and course of globalisation to make it work for inclusive and sustainable development. Applying

a critical and pluralistic approach, the chapters in this Handbook examine economics of development paths under globalisation, focusing on sustainable development in social, environmental, institutional and political economy dimensions. It aims at advancing the frontier of development economics in these key aspects and generating more refined policy perspectives. It is critically reflective in examining effects of globalisation on development paths to date, and in terms of methodological and analytical approaches, as well as forward-thinking in policy perspectives with a view to laying a foundation for sustainable development.

*Corporate Finance and Financial Development* - Shame Mugova 2022-08-09  
This book addresses key issues in corporate finance and explores them from financial development and financial stability perspectives in emerging markets. Emerging economies are susceptible to rapidly changing financial sectors

and products as well as financial upheavals. In this light, the growing interdependence of states and capital markets, and the risk of crises have an impact on the financing of firms. The chapters in this book highlight how companies and policies in emerging markets are affected and deal with the current post-crisis world. By combining academic and industry insights, the critical issues in corporate finance, financial development, and the preparedness of emerging markets are explored.

### **RUNX Proteins in Development and Cancer -**

Yoram Groner 2017-03-15

This volume provides the reader with an overview of the diverse functions of the RUNX family of genes. As highlighted in the introduction and several of the 29 chapters, humans and other mammals have three RUNX genes that are known to play specific roles in blood, bone and neuronal development. However, their evolutionary history has recently been traced back to unicellular organisms and their involvement in many well-known signaling

pathways (Wnt, TGFb, Notch, Hippo) is indicative of a more general function in cell biology. Their documented roles in cell fate decisions include control of proliferation, differentiation, survival, senescence and autophagy. The pleiotropic effects of RUNX in development are mirrored in cancer, where RUNX genes can function as oncogenes that collaborate strongly with Myc family oncogenes or as tumour suppressor genes. In the latter role, they display hallmarks of both 'gatekeepers' that modulate p53 responses and 'caretakers' that protect the genome from DNA damage. Several chapters focus on the importance of these genes in leukemia research, where RUNX1 and CBFb are frequently affected by chromosomal translocations that generate fusion oncoproteins, while recent studies suggest wider roles for RUNX modulation in solid cancers. Moreover, RUNX genes are intimately involved in the development and regulation of the immune system, while

emerging evidence suggests a role in innate immunity to infectious agents, including HIV. At the biochemical level, the RUNX family can serve as activators or repressors of transcription and as stable mediators of epigenetic memory through mitosis. Not surprisingly, RUNX activity is controlled at multiple levels, this includes miRNAs and a plethora of post-translational modifications. Several chapters highlight the interplay between the three mammalian RUNX genes, where cross-talk and partial functional redundancies are evident. Finally, structural analysis of the RUNX/CBFB interaction has led to the development of small molecule inhibitors that provide exciting new tools to decipher the roles of RUNX in development and as targets for therapy. This volume provides a compendium and reference source that will be of broad interest to cancer researchers, developmental biologists and immunologists.

**Population Studies and Development from Theory to Fieldwork** - Véronique Petit

2017-10-30

This book addresses major population and development issues: fertility and reproductive health, migrations, gender, education, poverty and inequalities. To that aim it revisits and considerably enlarges Kingsley Davis' 1963 theory of change and response, using interdisciplinary methodologies. On the basis of four decades of field research (1985-2015), it questions the rationality of the actors, how culture shapes socio-demographic behaviours, in a context of modernity and globalisation. More specifically, it casts new light on the interactions of individuals, families, networks and local communities with the State and its population policy.

### **Development of Classical and Modern Geodetic Reference Systems of Albania -**

Bilbil Nurçe 2023-04-09

This book addresses the problems of

mathematical relations between global and classical coordinate references from the practical applications point of view. It presents a large cartographic and numerical information set, which provides great values for practical and academical use based on the classical Albanian coordinative reference (ALB1986/ALB1987). This information is reflected from the positional point of view in the new modern Albanian satellite reference ALBPOS (Albanian Positioning System) or ALBCORS (Albanian Continuous Operation Reference Stations System). The main purpose of this Monograph is to summarize coordinative references applied in Albania in different periods, both classical and modern. Relevant transformation models between traditional/classical reference ALB1986 / ALB1987 and GNSS satellite reference are presented. The book furthermore recommends the mathematical models of the relationship in plan and height, between the Albanian classical

reference and the global/European coordinate references (ITRF, EUREF). It serves to professionals involved in fundamental geodetic works as well as all working with GNSS or developing GIS applications.

**The SGML Implementation Guide** - Brian E. Travis 2012-12-06

Foreword----- SGML is misunderstood and underestimated. I have always wanted to write this book. I am pleased that two people with whom I have had the pleasure to work were finally able to do so. Since I have always been a bit of an evangelist, I feel pride when my "students" become recognized "teachers". In the early years of SGML we struggled to define a language that would bring the information to its rightful place. We succeeded. Then we had to explain these idea to

technical adoptors. Again, I think we have succeeded. We have learned much about SGML in the process of implementing it. These experiences must now also be shared, along with comprehensible information on the lan guage itself. The word must move out of the lab and the computer center and reach the business people, the users, the movers and shakers. The next generation will do things with SGML that we can't even imagine yet- it is that versatile.
