Economics for Lawyers - Richard A. Ippolito 2012-01-12

Whether dealing with contracts, tort actions, or government regulations, lawyers are more likely to be successful if they are conversant in economics. Economics for Lawyers provides the essential tools to understand the economic basis of law. Through rigorous analysis illustrated with simple

graphs and a wide range of legal examples, Richard Ippolito focuses on a few key concepts and shows how they play out in numerous applications. There are everyday problems: What is the social cost of legislation enforcing below-market prices, minimum wages, milk regulation, and noncompetitive pricing? Why are matinee movies cheaper than nighttime showings? And then there are broader questions: What is the patent system's role in the market for intellectual property rights? How does one think about externalities like airport noise? Is the free market, a regulated solution, or tort law the best way to deliver the "efficient amount of harm" in the workplace? What is the best approach to the question of economic compensation due to a person falsely imprisoned? Along the way, readers learn what economists mean when they talk about sorting, signaling, reputational assets, lemons markets, moral hazard, and adverse selection. They will learn a new vocabulary and a whole new way of thinking about the world they live in, and will be more productive in their professions.

Power and Influence of Economists - Jens Maesse 2021-05-23

Economists occupy leading positions in many different sectors including central and private banks, multinational corporations, the state and the media, as well as serving as policy consultants on everything from health to the environment and security. *Power and Influence of Economists* explores the interconnected relationship between power, knowledge and influence which has led economics to be both a source and beneficiary of widespread power and influence. The contributors to this book explore the complex and diverse methods and channels that economists have used to exert and expand their influence from different disciplinary and national perspectives. Four different analytical views on the role of power and economics are taken: first, the role of economic expert discourses as power devices for the formation of influential expertise; second, the logics and modalities of governmentality that produce power/knowledge apparatuses between science and society; third, economists as involved in networks between academia, politics and the media; and fourth, economics considered as a social field, including questions of legitimacy and unequal relations between economists based on the detention of various

capitals. The volume includes case studies on a variety of national configurations of economics, such as the US, Germany, Italy, Switzerland, Greece, Mexico and Brazil, as well as international spaces and organisations such as the IMF. This book provides innovative research perspectives for students and scholars of heterodox economics, cultural political economy, sociology of professions, network studies, and the social studies of power, discourse and knowledge.
